Assessment Of Groundwater Availability And
The Hawaii Volcanic-Rock Aquifer Study will provide an updated assessment of groundwater availability in Hawaii; assess the current condition of Hawaii volcanic-rock aquifers and show how groundwater resources have changed as a result of natural and human stresses; provide a tool to assess responses to future stresses; and evaluate the adequacy of the current data network for assessing groundwater resources in the future.

National Water Census: Regional Groundwater Availability ...
The location and movement of the Nation’s fresh groundwater resources are still being evaluated. The availability of groundwater as a water source depends largely upon surface and subsurface geology as well as climate. The porosity and permeability of a geologic formation control its ability to hold and transmit water.

How common is groundwater and what affects its availability?
The glacial aquifer system groundwater availability study seeks to quantify (1) the status of groundwater resources in the glacial aquifer system, (2) how these resources have changed over time, and (3) likely system response to future changes in anthropogenic and environmental conditions.

Evaluation of Models and Tools for Assessing Groundwater Availability and Sustainability Management success depends upon accurate mapping and monitoring information at both the local and regional scale. One of the principles in this document is the idea that “we cannot manage what has not been assessed.”

Evaluation of Models and Tools for Assessing Groundwater ...
Groundwater is an important resource in Alberta. It is necessary to quantify the amount of groundwater available to compare with total groundwater allocation, and evaluate the risk associated with potential groundwater withdrawals due to increased development.

First-Order Groundwater Availability Assessment for the ...
The groundwater availability assessment of the NACP aquifer system highlights the importance of analyses at both the regional and local scales to understand how changes in land use, water use, and climate have affected groundwater resources and how these resources may change in the future.

Assessment of Groundwater Availability in the Northern ...
The Groundwater Availability Resource Assessment was undertaken for the first time in 2010 and updated in 2017. The specific prioritized aquifers that were chosen for analysis are shown in the figure below. The results of the initial assessment are included in the 2010 Groundwater Availability Resource Assessment report.

A combined approach quantifying both groundwater and surface-water resources, coupled with detailed information regarding the dynamics of existing water withdrawals and returns, would yield the most information for water-availability decisions at the local scale.

National Water Availability and Use Program - Great Lakes ...
The U.S. Geological Survey's Groundwater Resources Program (GWRP) is conducting an assessment of groundwater availability throughout the United States to gain a better understanding of the status of the Nation's groundwater resources and how changes in water use and climate may affect those resources.
