In order to achieve the desired system-simulation environment for electrical machine and con-trolled converters, the FEM computation must be coupled with the circuit and control simula-tion. For this purpose, new knowledge about the coupling mechanisms is required. Based on

Purpose. This paper aims to present a modified MEC algorithm for demagnetization modeling of the PM motor. One of the major issues that the designers of the permanent magnet (PM) motors are faced with is the demagnetization of magnets because of high temperatures and armature reaction.
